

A detailed technical line drawing of a mechanical assembly, possibly a pump or motor, shown from a side profile. The assembly consists of a large, rectangular motor housing on the left, connected to a central shaft or coupling, which is then connected to a complex pump or turbine assembly on the right. The pump assembly features multiple vertical components, including what appears to be a discharge pipe at the top and a base flange. The entire unit is mounted on a sturdy, wide base. The drawing uses standard engineering conventions, including center lines and dimension lines.
